

VERTICAL CYLINDRICAL RESERVOIR OPEN BIN-TYPE STORAGE

POLYETHYLENE (PE)

2395

1 Technical definition

- One-piece rotationally molded tank in food-grade, linear, high-density polyethylene, UV-protected
- Conical tank with flat bottom
- The lid is perfectly fitted to the tank and reinforced with ribs, making it extremely rigid
- Graduation to determine content level (except ACS models)
- Designed for storage of all food and chemical products (check compatibility) as well as drinking water (see ACS range)

2 Advantages

- One-piece moulded tank, with no glue or welds, so perfectly sealed
- Excellent impact resistance
- Smooth inner surface prevents sedimentation and facilitates cleaning.
- Litrage indication, graduation on the bowl
- Bottom flat for bulkhead pass-through
- Full opening at the top with external flange
- ACS-compliant (attestation of sanitary conformity)

Bottom flat for valve mounting (in option)

ACS tanks are blue

3 Use

- BAC cylindrical tanks are designed for the storage and handling of solid and/or liquid products.
- Used for storing drinking water, liquid fertilizer and food products, etc
- For chemical products, please consult our sales department for compatibility tables

Above-ground tanks cannot be buried.

4 Valves*

Valves	Designation
VPP25	Ball valve + wall bushing DN25

REFERENCES		USEFUL VOLUME (L)	Ø	A	Ø OPENING	WEIGHT	Mounted valve reference
NO ACS*	ACS**
